METAPETS

WHITEPAPER

CONTENTS

DISCLAIMER

This whitepaper is subject to revision from time to time without any notice as the project progresses. With regard to that we will publish any future updates on our website.

This document is a vision document and should not be considered a specification. It only helps to present MetaPets project to potential investors.

1 The Metaverse

The metaverse, an exciting and spellbinding new world where all things are possible. Current metaverse development is centered on addressing technological limitations with virtual and augmented reality devices.

You can do virtually **anything**, but in a world where things are vast, sometimes you might get lonely through all of that space. This is why we're building MetaPets, an innovative place where your new best friend is born.

2 Introducing MetaPets

MetaPets aims to be a first step in bringing love and companionship to the metaverse in a personalized way, allowing users to become owners of pets of their design. Never again do you have to worry about the painful feelings that come with loss.

Allergic to cats but love them? Fulfill your heart's wish to own your cat, made into an NFT, where the colors, sizes, and loveable furriness are customizable into your forever friend.

MetaPets aims to make your MetaPet adaptable to the virtual designs of the metaverse. Interoperable into other worlds, you can show your dog off in a dog show, have your prize cow produce milk to sell, and race your trophy-winning horse in a competition, all while earning a passive income from your MetaPets Investment.

What if you could own a pet that would be with you forever? Always there for you, always loving, always happy to see you. The concept is not so hard to imagine, especially now, when you envision your pet in a digital world in the metaverse.

It has inspired us to think about the relationship between real pets you adopt in the real world and ones that will always be with you in the Metaverse.

Your best friend is with you when you're sad, lonely, or tired and just want to be together. Never again will you lose your pet and have to deal with the grief and hardship of loss.

It's hard to get over the sadness, the loss, hard to feel like a new pet won't leave you too. But imagine you could own a forever pet in the metaverse. You can still have a friendship or be a family together in the metaverse. You can easily find pet owners who may suffer the same situation you have, and you can help each other get through the pain together. It's the starting point that we thought of when thinking about our pets, the possibilities to be together forever, which is why we created this project – MetaPets.

With the changes in global lifestyles and people adopting new ways to be creative while they are stuck at home, it may not be entirely random that 2021 was the year that people started talking seriously about the metaverse. During the pandemic, so many things have gone digital from necessity—from being social to shopping, that it sometimes felt as if we were halfway into the metaverse already.

Before that, Virtual Reality (VR) seemed like the most realistic way to push us to a transition into a reality-based digital world. We'll continue to see attempts to shift focus towards VR with headsets; however, once we are more comfortable wearing powerful devices and things like this go more mainstream, it's game over. Or could it possibly be interpreted differently? More like **GAME ON.**

In doing so, there will be different layers of reality that we will be experiencing, even in the same environment or physical space that slowly shifts us like we have been with our phones—passively, in a physical environment while mentally into a digital one. Yet, this is just the beginning, because beyond a phone, our whole bodies will be fully engaged, and that's where the metaverse starts to get interesting—where all things are possible, and a new and imaginative world with our friends and companions.

In this place, we genuinely begin to explore and live in these alternate realities simultaneously with our eternally loyal and loving MetaPets.

Thanks to the level of resolution and quality of today's technology, the metaverse may appear as natural as in real life. However, it's all pointing toward a more immersive entertainment experience that engages all of our senses while staying true to a creator's vision, for instance, the ability to have a secondary existence in a virtual world with your beloved pets. Owners can outfit their pets, train and breed them, show them off at the national dog show, and place them on a pedestal for others to envy.

3 **Project Goals and Vision**

   Our team believes that the metaverse will fundamentally change how we use technology to interact. Users will be able to digitize their real-world physical surroundings and interact with each other as life-like human selves instead of cartoonish avatars in pre-built virtual worlds. And MetaPets aims to provide the first digitalized virtual pets for the metaverse.

   OUR GOAL for the future is for MetaPets to be the ultimate platform to create and manage pets, and it will be the first game, the first customizable virtual pets in this highly advanced, fast-changing digital world.

   OUR VISION is to see that our project adds to the growth and value of the metaverse. It will indeed be interoperable and open—meaning that down the road, an owner will be able to use their MetaPets in other games/metaworlds that we, or anyone else out there, create. So, for example, your pet from MetaPets could be pulled into a training camp, a dog park, or any other type of game someone wants to build on different worlds in the metaverse without necessarily needing permission. Our community happiness is our number one priority and everything we build will be to reward our loyal community.

4 Project Utilities

We have put together some great utilities that we know will help our project grow and will benefit our community. We look forward to releasing them to our community.

Prize Fund Games:

Telegram Games

Discord Games

Tournaments

MetaPets App Games

Non Fungible Token (NFT):

- **Cherry Picking MetaPets NFT launches / Airdrops**

(Date of launch will be announced to our community when it's ready.)

- **NFT Limited Series Launch of Different Pet Collections**
- **NFT Super Exclusive NFT Pet Collection Frequent Airdrops to Holders**
- **NFT Marketplace for Pets (Buy / Sell / Swap)**

MetaPets Market is a peer-to-peer marketplace for NFTs, rare digital items, and crypto collectibles. Buy, sell, auction, and discover everyone using Metapets.

- **NFT Merch / Toy / Food for Pets (Buy / Sell / Swap)**

(A percentage of every resell of MetaPets NFTs will be redistributed among the MetaPets Holders and the original owner)

NFT Games:

- **Best Pet Contest** – Holders that have the most unique NFT pet based on rarity, traits, characteristics, and accessories can win incredible prizes.
- **2D Games**
- **3D Games**
- **Augmented Reality Games**
- **Tournaments**

What is MetaPets NFT?

MetaPets NFTs are made up of 2D and 3D characters which you can use to represent your pets in the metaverse. You can breed, stake and earn rewards with them.

MetaPets will launch various pets along the way in 4 Phases:

1. **Exclusive top holders only! Collection of Pets**
2. **Holders Airdrop Collection**
3. **Public Minting**
4. **Cross-Chain.**

Our NFTs will be used to play in our current games, which are played through the MetaPets app. And the future VR / AR / 3D games, not to mention the metaverse game in our final stage.

MetaPets 2D NFTs will launch on Binance Smart Chain (BSC) for a start and will be airdropped to token holders; more info on this will be made available to our community once it's close to launch date.

MetaPets 3D NFTs will be bridged into Ethereum blockchain. There will be an airdrop and public minting once it goes live.

Here is a sneak peek at our 2D MetaPets NFTs.

NOTE

Please note that the designs seen are not the completed NFTs, only samples of what styles, colors and sizes may resemble.

What are MetaPets Games?

MetaPets Games will be a way to engage the community and help them build relationships in a fun and competitive way. NFT games where you can train your MetaPet, dress them, and breed them are some of the many ways you will be able to constantly give love and care to your new friend. We know that competitions are practical, simple ways to build community, which is everything in projects, especially ones where you can eventually interact with other community members in the metaverse.
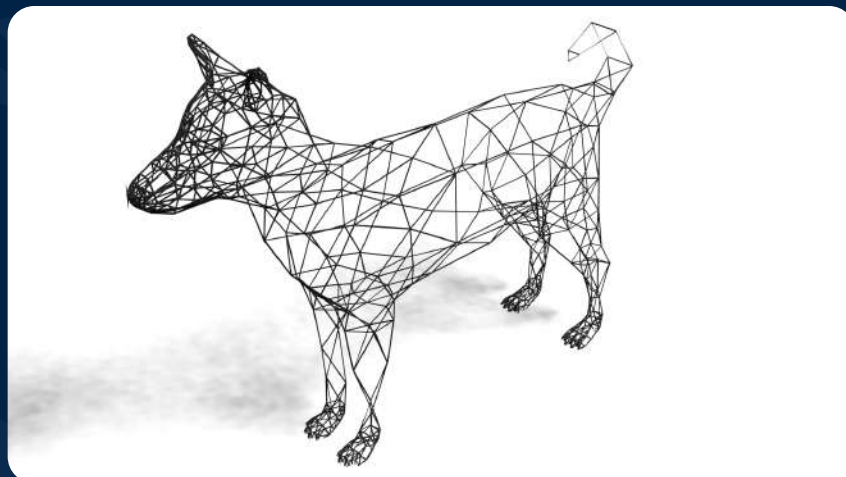

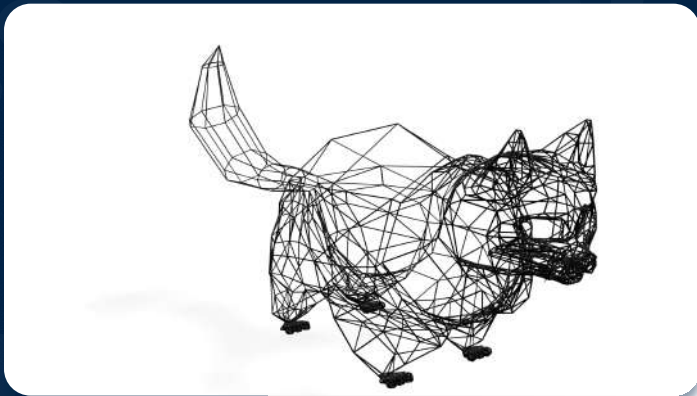

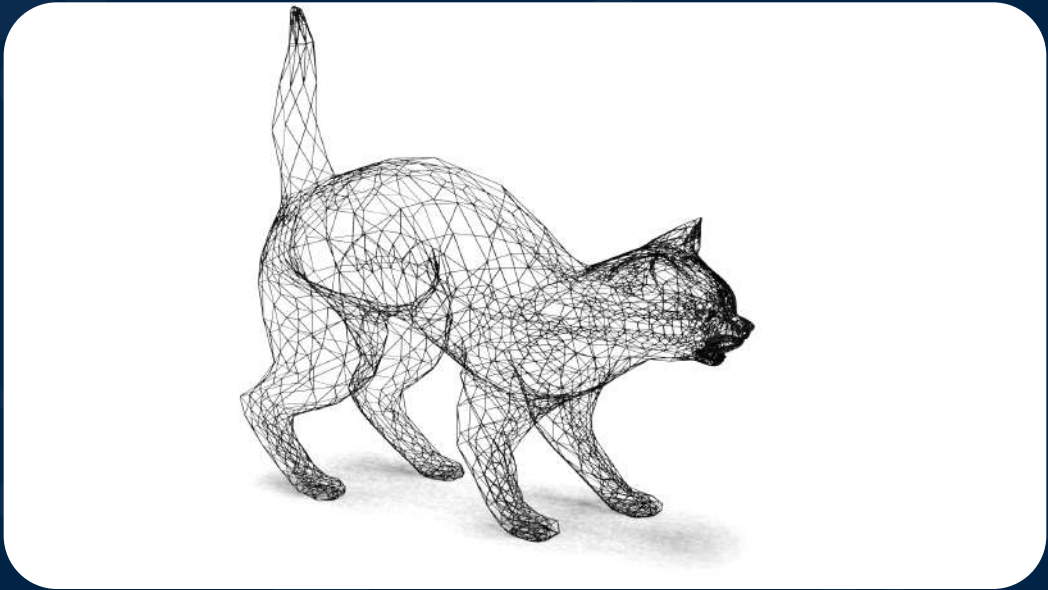

5 MetaPets 3D Wireframe

A 3D wireframe model is an **edge or skeletal representation of a real-world object.** 3D wireframe models consist of points, lines, arcs, circles, and other curves that define the edges or center lines of objects. You can use a 3D wireframe model to generate basic 3D designs for evaluation and fast design iterations.

With MetaPet's wireframes, users will be able to get a representation of their pets and surroundings into the Metaverse, with the ability to move objects in the Metaverse from one place to another.

We intend to work with other projects and business partners to accomplish this and we're already working towards making this a reality.

A sneak peek of how the Wireframe would look like:

6 **Project Dapps**

What is Meta Dapps?

All noteworthy projects have Dapps to bring investors accessibility and user-friendliness. MetaPets will have some of the most innovative and creative Dapps with multiple use cases built especially for users to create their own realities and confidently navigate the MetaPets platform. Everything from a swap Dex, a marketplace and a custom launchpad all supported by our staff and dedicated team, who will be there to assist you 24/7. Some of our Dapps include:

- **MetaPets Social meetups** for owners to show off their dapper, furry mate.
- **MetaPets Swap:** a decentralized exchange with the Lowest fees, you can swap tokens, stake and provide liquidity.

- **Custom Pet NFT Launchpad:** Send your new pet to the stars with our customized launchpad.

MetaPets is the first of its kind, allowing you to be one step ahead with the hype and expansion of the metaverse and crypto. In addition, MetaPets aims to be the first customizable NFT Pet companion for the metaverse. Where you can customize your own pet based on your preferences.

Use your imagination to customize your loving friend! Launch your own custom MetaPet, adopt any traits you want to make them unique, brag about your pet on MetaPets social media, and sell or swap it on the marketplace

MetaPets Breeding Dapp:

Breed your customized NFT MetaPets to your liking until it satisfies all of your needs and desires. MetaPets members can even mix two breeds of the same pet entirely on the blockchain to create a one-of-a-kind, never-before-seen offspring. Then, an owner can choose which of each pet's traits you'd like to keep to make the ultimate pet represent yourself or your real-life pet.

7 **PrizeFund Wallet**

This is where things get very special. We know our community will want to show off their pets, and what better way to do that than by holding contests, tournaments, and games for your prized poodle? So our PrizeFund wallet will collect taxes on every buy and sell in token volume to reward our NFT MetaPet owners when they participate in a collaborative contest for big cash prizes.

We are in the early stages of development and will share our vision along the way within our social media circles. Shhh... it's a secret for now! But we will launch telegram riddles, quests, and mini-games to help you understand more. We can't give up all the good stuff just yet!

8 MetaPets Final Stage

Even though we have already started working to integrate MetaPets into the metaverse, our final stage is the most complex, and thus, will take more time to complete. Eventually, your pet will be able to participate in other worlds across different platforms, excited to be with you, just like in the real world. Our virtual reality games are currently in development along with MetaPets' own VR headset, designed by a team of highly skilled and experienced technicians.

Take a look at our roadmap on **our website** for upcoming dates and follow us on social media to begin your journey with us! Finally, let's meet in the metaverse together, and, for example, start a breeding program for dogs, shelters for kittens, or just come together with other owners to make a great community in a place where anything is possible!

The Final Stage

- **Virtual Reality Games Development**
- **Integrating our games with Famous Metaverse Platforms**
- **MetaPets VR HeadSet**
- **MetaPets Custom Metaverse** - where pet owners can play, meet, breed their pets, and have fun

9 MetaPets Token

The MetaPets token is the governance and utility token for our ecosystem, which will fuel the use of our products. It has a total supply of **100 QUADRILLION** tokens and it's built on Binance Smart Chain as a Bep20 token. The MetaPets token will serve as payment options. Users get rewarded while using our products.

We're working to make sure our products are solid, and as long as they're working, the MetaPets token will always be here. No other token will be created for any product of ours and the MetaPets token will have a bridge to other chains as we continue to make progress.

10 Tokenomics

TOTAL SUPPLY: 100 QUADRILLION

2% - Redistributed to our amazing holders

3% - To Liquidity to maintain stability

5 % - To PrizeFund wallet for community games with cash prizes

1% -Towards aggressive marketing

2% - Used by AI technology to strategically buy back tokens and kick out paper hands
